

Accessibility Focused Redesign - Project Report

Introduction

Accessibility ensures digital products can be used by people of all abilities. This project redesigns a user interface by applying accessibility best practices.

Objective

Enhance readability, navigation, color contrast, typography, touch targets, and overall usability following WCAG 2.1.

Tools Used

Figma, GitHub, Microsoft Word, PDF.

Issues Identified

Low contrast, small text, unclear labels, inconsistent spacing, and small clickable areas.

Improvements

Improved contrast, larger fonts, descriptive labels, better spacing, keyboard-friendly layout, and larger buttons.

Benefits

Better usability, inclusivity, accessibility, and user satisfaction.

Conclusion

The redesigned interface demonstrates how accessibility principles create a better experience for every user.
